

Application for evaluation of stallion for semen import 2020

Application for an interim breeding permit for stallion whose semen is to be imported to Sweden. Application and requested documentation are due January 27th, February 25th, March 24th or April 26th and are to be sent to SWB, Box 2, 247 29 Flyinge, Sweden or to ulrica.holst@swb.org

The following documentation is requested:

- Official pedigree information from breeding association.
- Official information on stallion test results from breeding association.
- A copy of the latest conformation description of the stallion from its performance test.
- Official information on stallion's competition/show results.
- Official information on siblings, dams or other close relatives show/breeding results.
- Official information on offspring and the stallions breeding index in other associations.

Foreign stallions that are to be approved for semen import to Sweden, within the breeding program of the Swedish Warmblood Association (SWB), must have a health certificate. The certificate must be issued by a veterinarian working in conjunction with the breeding federation of which said stallion is approved.

The veterinary report should include the following:

- Stallion name, identification number and pedigree.
- Owner name and address.
- Mandatory radiographs (x-rays). The stallion must have no signs of osteochondrosis (ocd) in its stifles and hocks.

The x-rays need to include the following projections:

Stifle joints both hind: LM view with both trochleas clearly separated and definable and at least 2/3 of patella visible. Hock joints both hind: PI lat-DMO view + DPI view with medial malleolus of tibia clearly visible.

Please note that for identification, the stallions ID, chip- or registration number need to be printed on the x-rays.

- Endoscopic examination concerning recurrent laryngeal neuropathy (RLN) in stallions.

Please note that it's mandatory that the correct ID of the stallion is visible on the video, either chip number or registration number must be clearly visible. The stallion can't be under any sedation during the examination, but a nose twitch can be used.

The endoscope shall be brought up the horses right nostril and give a complete view of the whole larynx and be correctly positioned in a horizontal plane. The video must be at least one minute long and contain three swallowing reflexes and one part with the outer nostrils temporarily occluded.

- Attestation that the stallion has normal reproductive organs, including testes. Rotation of one or both testes, significant differences in size or firmness, absence of testis by nature or due to surgical intervention, or other significant abnormalities must be noted.
